

Travelling Salesman

The Travelling Salesman Problem (TSP) finds the minimum-cost route that visits every city exactly once and returns to the starting city. This program generates all possible routes using permutations() and calculates the cost of each route. Finally, it selects the route with the minimum cost.

Time Complexity: $O((V-1)! \times V)$

Space Complexity: $O(V)$ excluding permutation storage.

Output :-

```
Problems  Output  Debug Console  Terminal  Ports
● PS C:\Users\shiva\Desktop\UNI Coding\DAA> cd "c:\Users\shiva\Desktop\UNI Coding\DAA"
  Minimum Cost of Travelling Salesman = 80
○ PS C:\Users\shiva\Desktop\UNI Coding\DAA>
```
